DETAILED ACTION

Response to Arguments

1. Applicant's arguments with respect to claims 7-9 have been considered but are moot in view of the new ground(s) of rejection.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 7-9 and 17 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by Bohlen et al. (USPN 4,513,203).

4. Regarding claim 7, Bohlen et al. teaches a beam adjusting sample having a flat surface (Note Fig. 4I), having two adjacent orthogonal edges where a microstructure is attached to the surface of the sample (Note Mask structure corresponding to elements "M" in fig. 4I, or layer Item 47 in Fig. 4G), and a film of gold having high electron stopping power is coated on a surface of the microstructure (Item 41).

5. Regarding claim 8, Bohlen et al. further teaches that the sample is defined by two edges (Fig. 4I) and that a through hole penetrates in a thickness direction (Fig. 4I Item R).

6. Regarding claim 9, Bohlen et al. shows that two orthogonal edges are at an end of the beam adjusting sample in Fig. 4I.

Art Unit: 2881

7. Regarding claim 17, the through hole is formed at an angle of 90 degrees with respect to the surface of the sample in Fig. 41.
